

# Our Proposal for A Better Future

## Group H

As youth of the world, we have a lot of things we can see from our different perspectives. We can see the good and the bad of our respective countries from our own point of views. The following are the summary of our discussion about our point of views.

From the three countries that are represented here; Austria, USA, and Indonesia, we have decided that there are things from each country that can be implemented in a better future:

- Solid Social Security System
- Diverse Culture
- Freedom of Speech

The biggest problem with the world in our eyes is the lack of tolerance. The lack of insensitive from each group to work together to create a better future would delay the improvement of our society.

We decided that the best way to fix the lack of tolerance is to educate kids about other cultures and how to tolerate other people. This could very easily be implemented in subjects such as civic or social studies, so students would be exposed to the outside world.

### **First Step Program**

“First Step towards a better future”.

Use virtual reality to put people directly in different situations. This let people understand what it's like to walk in other people's shoes.
