Kenya Activity Report

Evening supplementary classes started at a primary school

In Kenya, where the whole country is undertaking initiatives to educate children, the courses to take after finishing primary education greatly differ depending on one's academic abilities. By installing solar power generators and power storage systems in the primary school, lights can now be used during the night, and we have started supplementary classes that run from 7:00 p.m. to 9:00 p.m. to improve the children's academic abilities. Teachers also spoke of their expectations, saying, "We will be able to deliver higher quality education." (January 2019)
